

Replacing this... with this!

Warning: Prior to installation, please reference the product manual and any applicable local codes.

JPP Parts required for retrofit:			
MC Series MPPT Solar Charge Controller SC-30A-MPPT	Solar Remote Display SC-RR	Display Cable (25') SC-CABLE25	Bluetooth Adapter Module SC-BTM

Required for Solar Remote Display Option! (indicated by a dashed arrow from SC-CABLE25 to SC-RR)

Commonly preferred! (indicated by a dashed arrow from SC-CABLE25 to SC-BTM)

If retrofitting a JPP 30Amp RVC Controller with a new MC Series Controller, the Solar Remote Display is a different size and may require an adapter plate. If using a Bluetooth Adapter Module, the existing remote display is in-op and can either be left in or replaced with a cover plate.

Before beginning replacement, please confirm panel and battery wires at Controller do not have voltage present.

Upon replacement, please ensure all wires are properly reinstalled and secured per factory recommendations. There will be a remote cable from old controller that will not be used for the install. If remote display option is desired, an additional cable (SC-Cable25) would be required.

Once installed, plug in Solar Remote Display or Bluetooth Adapter Module to begin monitoring Controller operations. ***

*****NOTE:** Please reference the download and pairing document if using the Bluetooth Adapter Module.

NOTE: This JPP Remote Display will not be used after replacement.
